From: Patrick Smith, representing Citizens to Protect Tract 1998

Subject: East Fork of Meadow Creek and the 303(b) Update

It is our understanding that San Luis Creek and Arroyo Grande Creek will be added to the Central Coast Polluted Waters List because of the presence of excess fecal coliform (among other reasons).

The Arroyo Grande City Council recently voted 3-2 to allow a tributary of the East Fork of Meadow Creek to be filled and graded for custom home sites on Tract 1998, despite a strongly worded letter of disapproval from the CCRWQCB (Roger Briggs, April 12th, 2008). We are concerned that filling this tributary (and destruction of the wetlands fed by it) and run-off from homes built on the fill will cause fecal coliform pollution and sedimentation of Meadow Creek just as in the adjacent San Luis and Arroyo Grande Creeks.

We strongly urge to CCRWQCB to act to save the tributary and wetlands on Tract 1998, as a step towards keeping Meadow Creek off the Polluted Waters List. Prevention is certainly more cost effective than clean-up efforts after the fact. Please instruct our citizens group on how we can provide public comments on this issue to the CCRWQCB, as well as comments on the City's Storm Water Management Plan currently in preparation.

Yours respectfully,

Patrick Smith

Citizens to Protect Tract 1998
